

# NC STATE UNIVERSITY

## CROP AND SOIL SCIENCES

---

### **CS 590 Special Topics**

*Programming and Data Science for Applied Research*

# Course Concepts and Workflow

WHAT DO YOU HOPE TO LEARN IN THIS CLASS?

Underlying Course Concepts in R and Python

- Basic Programming Skills
- Advanced Programming Topics and Packages
- Data Visualizations and Interactive Packages
- Machine Learning (Supervised and Unsupervised) Algorithms
- Section Exercises and Capstone Project

# Environment Setup – Anaconda (Prompt)

## Objectives

- Install the Anaconda Working Environment
- Install R and Python3 Kernels for Jupyter Notebooks
- Open and Explore Jupyter Notebooks
- GitHub Exercise

Let's Browse the Syllabus!

# Anaconda and Jupyter Notebooks

- Anaconda is a distributions of R and Python with working environments for many programming languages – via Jupyter Notebooks
- Jupyter Notebooks is an **I**ntegrated **W**orking **E**nvironment (IDE) that manages multiple programming languages (kernels) under one environment
- Jupyter Notebooks gives programmers the ability to write code, display images, and write markdown notes for future references all in one window
- Jupyter Notebooks is the most popular IDE in data science and it is a great learning tool

# Disclaimer...

Jupyter Notebooks is not the only IDE available for R and Python programming

Feel free to use any IDE for R or Python  
(e.g. Sublime, TextWrangler, R Studio, Vi/Vim, Visual Studio)

It won't hurt my feelings... much

# Remote Desktop Connection (Recommended)

# Anaconda Setup and Installation

Determine the Computer for Setup and Installation

- Remote Desktop Connection (IP Address Required) – **Recommended**
- Local Machine (Lab Computer or Laptop)

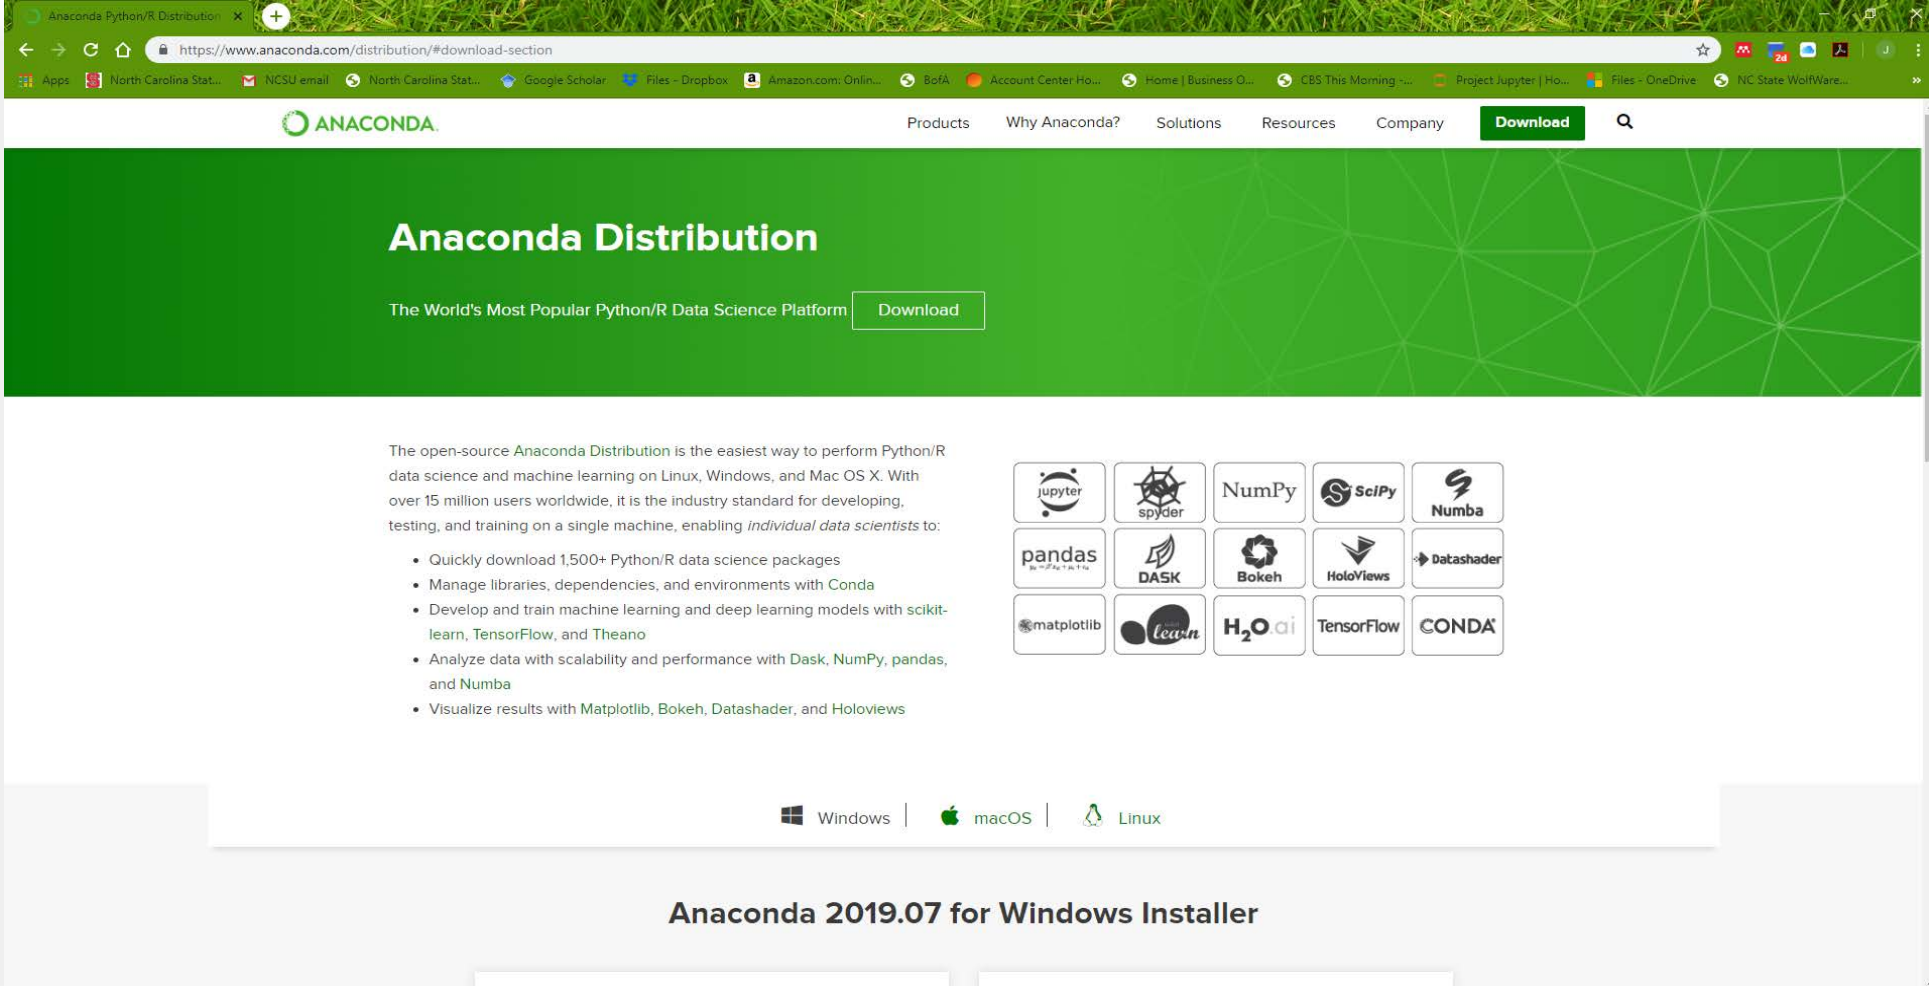

Let's Download Anaconda!

- Go To:  
<https://www.anaconda.com/distribution/>
- Or Google Search  
Anaconda 3 – Click the first link (Anaconda Python/R Distribution – Free Download)

Binder Rendering

- Online Only (Binder/Docker Setup)

# Download Anaconda 3 – Home Page

The screenshot shows the Anaconda Distribution website. The browser's address bar displays `https://www.anaconda.com/distribution/#download-section`. The website features a green header with the Anaconda logo and navigation links: Products, Why Anaconda?, Solutions, Resources, Company, and a prominent green 'Download' button. Below the header, a large green banner contains the text 'Anaconda Distribution' and 'The World's Most Popular Python/R Data Science Platform', accompanied by another 'Download' button. The main content area describes the open-source distribution as the easiest way to perform Python/R data science and machine learning on Linux, Windows, and Mac OS X, citing over 15 million users. It lists several benefits: quickly downloading 1,500+ packages, managing libraries and environments with Conda, developing machine learning models with scikit-learn, TensorFlow, and Theano, analyzing data with Dask, NumPy, pandas, and Numba, and visualizing results with Matplotlib, Bokeh, Datashader, and Holoviews. To the right of the text is a grid of 16 logos for various data science libraries and tools, including Jupyter, Spyder, NumPy, SciPy, Numba, pandas, DASK, Bokeh, Holoviews, Datashader, matplotlib, scikit-learn, H2O.ai, TensorFlow, and CONDA. At the bottom, there are links for Windows, macOS, and Linux, followed by the text 'Anaconda 2019.07 for Windows Installer'.

## Anaconda Distribution

The World's Most Popular Python/R Data Science Platform [Download](#)

The open-source Anaconda Distribution is the easiest way to perform Python/R data science and machine learning on Linux, Windows, and Mac OS X. With over 15 million users worldwide, it is the industry standard for developing, testing, and training on a single machine, enabling *individual data scientists* to:

- Quickly download 1,500+ Python/R data science packages
- Manage libraries, dependencies, and environments with Conda
- Develop and train machine learning and deep learning models with scikit-learn, TensorFlow, and Theano
- Analyze data with scalability and performance with Dask, NumPy, pandas, and Numba
- Visualize results with Matplotlib, Bokeh, Datashader, and Holoviews

### Anaconda 2019.07 for Windows Installer

# Download Anaconda 3 – Windows Installer

The screenshot shows the Anaconda website's download section for Windows. The browser's address bar shows the URL <https://www.anaconda.com/distribution/#download-section>. The page has a green header with navigation links for Windows, macOS, and Linux. The main heading is "Anaconda 2019.07 for Windows Installer". Below this, there are two white boxes for different Python versions. The "Python 3.7 version" box contains a green "Download" button and lists two installers: "64-Bit Graphical Installer (486 MB)" and "32-Bit Graphical Installer (418 MB)". The "Python 2.7 version" box contains a green "Download" button and lists two installers: "64-Bit Graphical Installer (427 MB)" and "32-Bit Graphical Installer (361 MB)". Below these boxes is a section titled "Get Started with Anaconda Distribution" with five white boxes containing links to documentation, blog, community support, webinars, and training. The bottom of the browser window shows a taskbar with a file named "Anaconda3-2019.0....exe" and a "Show all" button.

# Binder Exploration – GitHub Input

The screenshot shows the Binder website interface in a web browser. The browser's address bar displays `mybinder.org`. The page features the Binder logo at the top, followed by the heading "Turn a Git repo into a collection of interactive notebooks". Below this, a paragraph explains that Binder allows users to open Jupyter notebooks in an executable environment. The main section is a form titled "Build and launch a repository". It includes a text input for the "GitHub repository name or URL" containing `jcdunne/CS590`, a dropdown menu set to "GitHub", a text input for the "Git branch, tag, or commit" containing `Python`, and an optional text input for the "Path to a notebook file (optional)". A "launch" button is positioned to the right of the optional path input. Below the form, a text box displays the generated URL: `https://mybinder.org/v2/gh/jcdunne/CS590/Python`. At the bottom, there is a section for copying a badge to a README, showing a small "launch binder" badge icon and a right-pointing arrow.

Thanks to Google Cloud and OVH for sponsoring our computers 🍷

## binder

Turn a Git repo into a collection of interactive notebooks

Have a repository full of Jupyter notebooks? With Binder, open those notebooks in an executable environment, making your code immediately reproducible by anyone, anywhere.

Build and launch a repository

GitHub repository name or URL

GitHub

Git branch, tag, or commit

Path to a notebook file (optional)

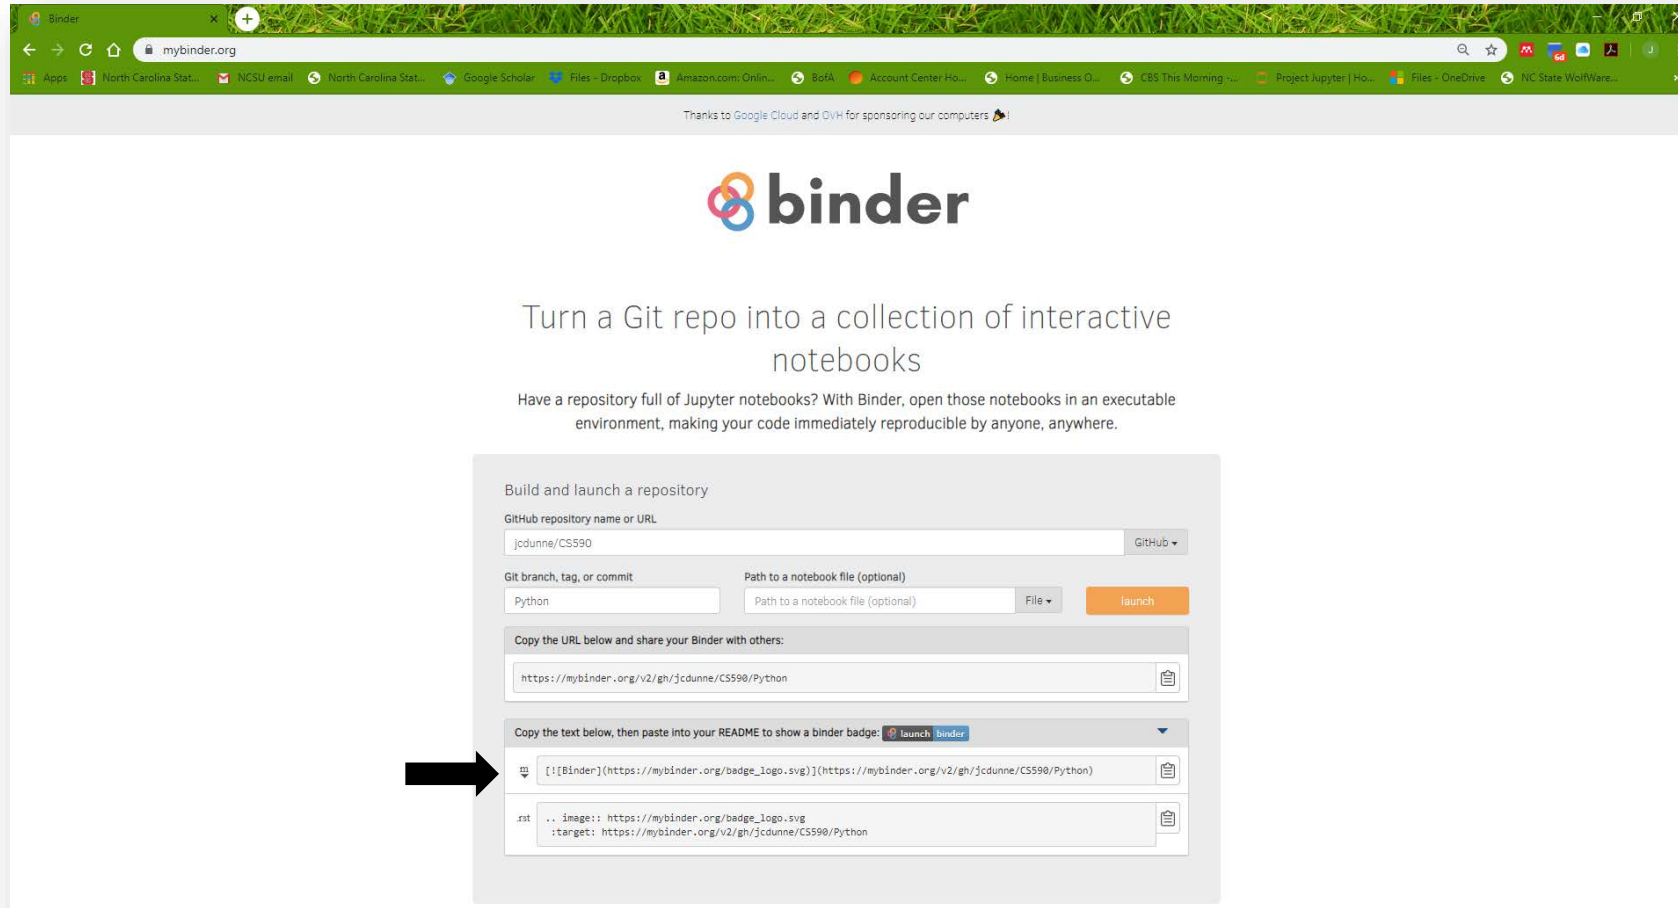

File launch

Copy the URL below and share your Binder with others:

📄

Copy the text below, then paste into your README to show a binder badge: 🔗 launch binder ➡

# Binder Exploration – GitHub Rendering

The screenshot shows the Binder website interface. At the top, there's a navigation bar with the Binder logo and a search bar. Below the navigation bar, the main heading reads "Turn a Git repo into a collection of interactive notebooks". A subheading states: "Have a repository full of Jupyter notebooks? With Binder, open those notebooks in an executable environment, making your code immediately reproducible by anyone, anywhere."

The "Build and launch a repository" section contains the following fields and buttons:

- GitHub repository name or URL:** A text input field containing "jcdunne/CS590".
- Git branch, tag, or commit:** A text input field containing "Python".
- Path to a notebook file (optional):** A text input field containing "Path to a notebook file (optional)".
- File type:** A dropdown menu set to "File".
- Launch button:** An orange button labeled "launch".

Below the form, there are two sections for sharing the Binder URL:

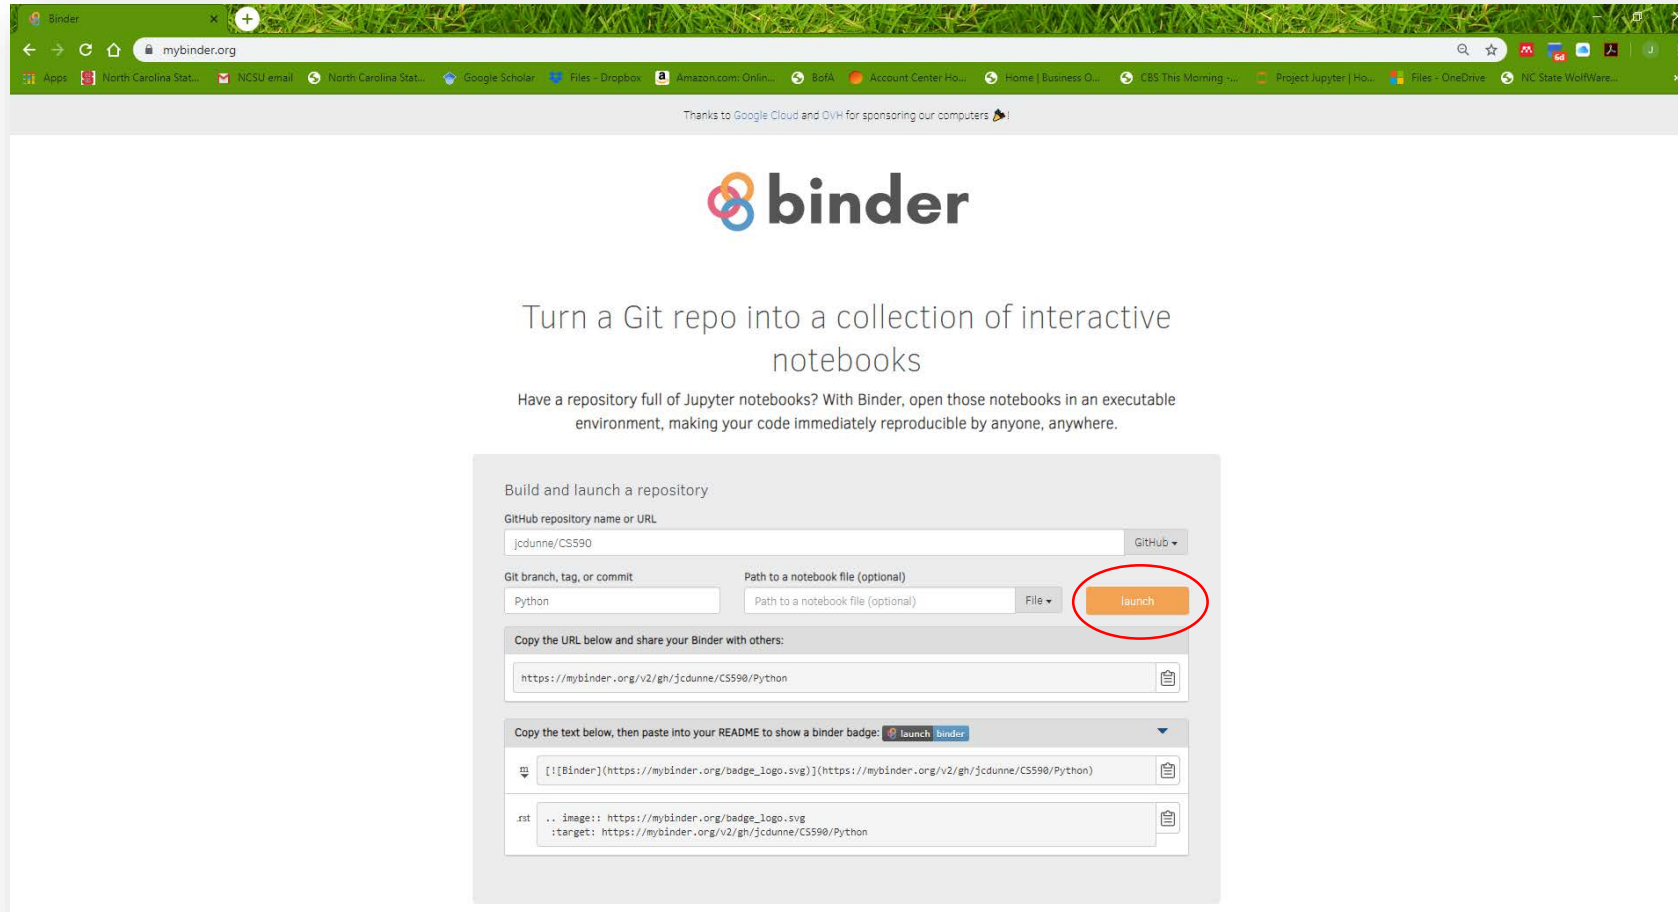

- Copy the URL below and share your Binder with others:** A text area containing the URL "https://mybinder.org/v2/gh/jcdunne/CS590/Python".
- Copy the text below, then paste into your README to show a binder badge:** A text area containing the following code:

```
[[Binder]](https://mybinder.org/badge_logo.svg)(https://mybinder.org/v2/gh/jcdunne/CS590/Python)
```

A black arrow points to the README code block. Below the code block, there is a small text area with the following content:

```
.. image:: https://mybinder.org/badge_logo.svg
   :target: https://mybinder.org/v2/gh/jcdunne/CS590/Python
```

# Binder Launch – Accessing GitHub Repository

The screenshot shows the Binder website interface. At the top, there's a green header with the Binder logo and the text "Turn a Git repo into a collection of interactive notebooks". Below this, a section titled "Build and launch a repository" contains a form. The form has a text input for "GitHub repository name or URL" with the value "jcdunne/CS590" and a dropdown menu set to "GitHub". Below this, there are two rows of inputs: "Git branch, tag, or commit" with the value "Python", and "Path to a notebook file (optional)" with a dropdown menu set to "File". A red circle highlights the "launch" button. Below the form, there's a section "Copy the URL below and share your Binder with others:" with a text input containing the URL "https://mybinder.org/v2/gh/jcdunne/CS590/Python". At the bottom, there's a section "Copy the text below, then paste into your README to show a binder badge:" with a text input containing the badge code: `[[Binder]](https://mybinder.org/badge_logo.svg)(https://mybinder.org/v2/gh/jcdunne/CS590/Python)`. Below this, there's a section "rst" with a text input containing the RST code: `.. image:: https://mybinder.org/badge_logo.svg :target: https://mybinder.org/v2/gh/jcdunne/CS590/Python`.

# Binder Build – Building the Environment

The screenshot shows the Binder website interface in a web browser. The browser's address bar displays 'mybinder.org'. The page features the Binder logo at the top, followed by the text 'Turn a Git repo into a collection of interactive notebooks'. Below this, a paragraph explains that Binder can open Jupyter notebooks in an executable environment. The main section is titled 'Build and launch a repository' and contains a form for specifying a GitHub repository. The repository name 'jcdunne/CS590' is entered, and the 'launch' button is highlighted. Below the form, there are sections for copying the URL and a badge, and a 'Build logs' section at the bottom showing the progress of the build process.

Thanks to Google Cloud and OVH for sponsoring our computers

## binder

Turn a Git repo into a collection of interactive notebooks

Have a repository full of Jupyter notebooks? With Binder, open those notebooks in an executable environment, making your code immediately reproducible by anyone, anywhere.

Build and launch a repository

GitHub repository name or URL

jcdunne/CS590

GitHub

Git branch, tag, or commit

Python

Path to a notebook file (optional)

Path to a notebook file (optional)

File

launch

Copy the URL below and share your Binder with others:

<https://mybinder.org/v2/gh/jcdunne/CS590/Python>

Copy the text below, then paste into your README to show a binder badge:

 [launch binder](https://mybinder.org/v2/gh/jcdunne/CS590/Python)

`[[binder]](https://mybinder.org/badge_logo.svg)))(https://mybinder.org/v2/gh/jcdunne/CS590/Python)`
